Configure Scaling Activity Notification

You can manually execute a simple scaling rule to start a scaling activity. After the scaling rule is executed, you can go to Scaling Activities to view the scaling result. Each scaling group can have a maximum of 20 scaling rules.

Create Scaling RuleRule IDEnter scaling rule IDs. Separate multiple L...Search

| Scaling Rule ID/Name | Rule Type | Start Time | Operation | Actions |
|---------------------------------|---------------------|---|---|---|
| asr-l4vbk9aaah4uoypa3epScaleIn | Simple Scaling Rule | Triggered by an associated event-triggered task: ScaleIn Before the scaling rule is executed again, it must wait for the scaling activity to complete and the cooldown period to expire. | In the scaling group, InstancesRemove 1 Instances | Execute Edit Delete |
| asr-l4vbk9aaah4uoypa3eoScaleOut | Simple Scaling Rule | Triggered by an associated event-triggered task: ScaleOut Before the scaling rule is executed again, it must wait for the scaling activity to complete and the cooldown period to expire. | In the scaling group, InstancesAdd 1 Instances | Execute Edit Delete |

Each time a scaling rule is executed, or you manually add instances to or remove instances from the scaling group, a scaling activity is triggered. You can create notification rules to enable Auto Scaling to notify you of any changes in the scaling group. This way, you can obtain dynamic information about the scaling group and manage the group at the earliest opportunity.

Search by scaling activity ID. Separate multiple IDs with commas (,).Search
